

Introduction-

Irrefutably, as more and more industries are being established and their huge impact can be seen on the whole life cycle by disturbing the equilibrium with excessive use of natural resources. In order to combat such problems, industrialists should restrict the overconsumption of fossil fuels.

BP1

It is pertinent to mention that enormous utilization of non-biodegradable elements degrades the ecosystem drastically. As industrialists, for the sake of profit, are using less eco-friendly products as plastic, e-waste. Moreover, to set up industries, large space is needed which leads to clearance of trees and this deforestation imbalances the environment.

BP2

Consuming fossil fuels wisely seems to be considered as an intellectual ideology to maintain balance in environment. In addition to, masses should be encouraged to afforestation, so that by planting more and more trees, they can help in maintaining balance of environment. Hence, such amalgamated efforts can preserve environment.

CONCLUSION

In compendium, to limit utilization of fuels as well as encouraging masses to plantation are the best remedies to sustain equilibrium gets disturbed due to deforestation along with squandering of resources as well.
