

SAMPLE ANSWER

The presented line graph contains the data about the cases of X diseases in Someland between the time period of years 1960 and 1995.

As an overall trend, it is lucid that a rapid increase was witnessed in the number of cases of X diseases until the mid 70s while there was no patient of this disease in 1995.

In 1960, 100 cases of X diseases were registered which remained constant even after five years. Then the number of patients, who had X diseases, dramatically increased by 400 in 1975 and the same count was found for five years.

In the following five years, the figure for the people, who were suffering from X diseases, declined to 350 which further plummeted and became zero in 1990. Interestingly, in the time span, from 1990 to 1995, the nation was free of the disease as there was not any patient found.
