

ANSWER

The rendered polyline graph delineates the information about the spendings on booklets by four different nations during 1995 to 2005. The data calibration has been done in \$US dollars.

Overall, by looking at the data points, there appeared to be a clear upward pattern in Germany, whereas over the period of 10 years, there was a downward trend in rest three countries.

In 1995, the amount of money, which was spent by Germany and France, noticed as 80 millions and approximately 55 millions respectively. After four years, the figure of Germany's income on hard copies reached to 90 millions, however France invested 60 millions in 1999. After inclining to almost 100 millions in 2005, the expenditure done by Germany on booklets dipped to about 85 millions in 2003. From 2001 to 2005, a gradual upsurge was observed in France on book's purchasing, accounted for above 70 millions.

In 1995, Italy decided to lay out 50 millions on printed media, on the other hand Austria expended only 30 millions in the same year. After dewindling slightly to 50 millions, the figure of spendings on books was gradually inclined to above 60 millions in 2005. In the case of expenses on publications by Italy, before climbing to 70 millions in the final year, there was a steady stage between 1999 to 2001
